OBJECTIVE

Highly motivated third-year computer science student with strong programming.Data structures and Algorithms skills,eager to contribute to innovate projects and learn from industry leaders through an internship opportunity.

SKILLS

- **Programming Languages:** C/C++, Java, Python, SQL
- **Technologies and tools:** HTML,CSS,AWS Services
- **Basic Concepts:** Algorithms, Data Structures, OOP, Problem-Solving
- **Academiv CourseWork:** Data Structures,Operating Systems(Windows,Unix/Linux),CN,OOP,DBMS
- **Soft Skills:** Communication Skills,Teamwork and Collaboration,Problem-Solving,Time Management,Leadership Potential,Work Ethic

EDUCATION

- | | |
|--|---------------|
| • B.Tech in CSE(AIML) ,B V Raju Instituite of Technology,Narsapur | Expected 2026 |
| • CGPA:7.01/10 | TG, India |
| • Intermediate (MPC) ,Vector IITNEET Junior college | 2020-2022 |
| • Percentage: 80 | TG,India |
| • SSC Board ,Vandematharam High School | 2018-2020 |
| • GPA:9.8/10 | TG,India |

PROJECTS

Object Recognition Speech Synthesis with User Voice Input Jan 2024 – July 2024

- Developed an intelligent system that integrates object recognition and speech synthesis, allowing users to interact with the system through voice commands. The project used a deep learning model (e.g., CNN) for object detection via a webcam, and the system responded by identifying objects and providing audio feedback.
- **Key technologies used:**Python, TensorFlow, OpenCV, SpeechRecognition, gTTS (Google Text-to-Speech)

Synthetic Data Generation for Healthcare Dec 2024 – March 2025

- Developed and implemented synthetic data generation techniques for healthcare applications, focusing on privacy-preserving patient data.
- Developed and implemented synthetic data generation techniques for healthcare applications, focusing on privacy-preserving patient data.
- Led initiatives using synthetic patient data to support predictive modeling, risk analysis, and validation of healthcare algorithms, ensuring compliance with privacy regulations (e.g., HIPAA, GDPR).
- Enhanced model accuracy and robustness by generating data to simulate various health scenarios, improving healthcare outcomes prediction.
- **Key technologies used:** Python, NumPy, pandas, Faker, Scikit-learn, Matplotlib

EXPERIENCE

- **Learning Plan for Mastering Data with Machine Learning Internship**, IBM SkillsBuild Oct 2024
- Cleaned, processed, and analyzed large datasets to prepare them for machine learning models using Python (Pandas, NumPy).
- Built and fine-tuned machine learning models (supervised and unsupervised learning) using Scikit-learn, TensorFlow, and Keras.
- Gained hands-on experience with advanced ML techniques, including deep learning and natural language processing (NLP).
- Collaborated with senior data scientists to solve real-world business problems and present actionable insights.

CERTIFICATIONS
